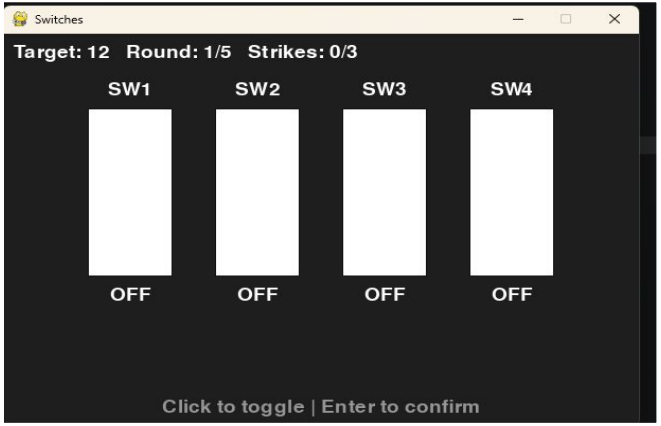
Defuse The Bomb

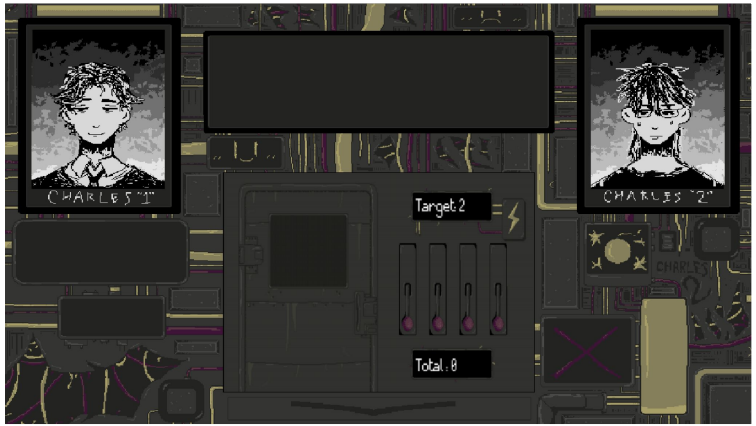
Ethan Pineiro, Charles Campbell, Charles Kahlenberg

Implementations

Future Work

- Fully animate the game
- Integrate more story elements
- More compatibility with other formats (like browser)
- Add difficulties
- Add online leaderboard for time





Lessons learned

- Ui/Ux development and integration takes TIME
- Planning out tasks / setting deadlines
- How to use GitHub and Linux commands related to GitHub on the RPi

Some issues we had while creating

- Assets were scaled wrong so had to change them
- Certain features of the game would've taken too much time so we had to scrap them
- We wanted to add more animations but the RPi was struggling to handle the workload.
- Wanted to add a whole extra game at the end...Completely scrapped (Asset can be seen on the left)

If we could redesign what WE would do

- Our main problem with the project was the functionality of the wires
- Other than that maybe make it easier to transfer into pygame or have a pygame version on the ready

GAME TIME
